### **DEMANDING JOBS DEMAND EXCEPTIONAL DURABILITY.**

Refuse, construction and specialty applications are the toughest assignments you can give a truck. And no low cab forward takes on more of those tasks than the Mack® MR model. It's the most popular truck in its class.

The Mack difference is durability. The MR model's galvanized steel cabs resist rust and corrosion. Its rugged steel frame is heat treated and flared at the front for heavier payloads and a low center of gravity. And its standard powertrain features Mack's Balanced Design engines, transmissions and rear axles, engineered to work together for maximum performance and service life.

Small wonder why year after year, more companies choose the Mack MR model for the most demanding jobs.

Power, heavy-duty engineering and flexible body configurations permit the Mack MR series to be adapted for various municipal and severe service duties.

The MR chassis is ideally suited to specialty applications such as fire service.

## MR Model

### HIGHER DRIVER PRODUCTIVITY AND OPERATING EFFICIENCY.

The MR truck has a two-piece tinted windshield that allows full view of the road way to within five feet of the bumper. Standard low-ledge side windows, right door peep window, and dual West Coast mirrors enhance the truck's exceptional visibility. The cab is a quiet, comfortable place to work. The standard driver's seat is air suspended. All gauges and controls are ergonomically positioned and power steering is standard. All contributing to keeping the operator more focused on the task at hand.

Routine maintenance is simpler, too. The cab tilts 60°, allowing easy access to the engine compartment. Nibble handling permits the MR truck to get in and out of tight spots faster and easier. In fact, everything about it is designed to help the operator accomplish more, every working day.

*Excellent visibility and maneuverability make the Mack MR truck an ideal fuel delivery vehicle.*

*The low cab forward configuration and light wheel cuts make the MR model more agile than conventional trucks.*

*The interior of the MR truck is a comfortable place to do business. All gauges and controls are within easy sight and reach. An air-suspended driver's seat is standard.*
